

7games baixar o app android

There are 9 squares involved with the 7, so $480 \times 9 = 4710$ other squares. These other squares contain the 92 other mines. So the number of grids with a 7 at a particular spot is $8(4710/92)$. That is out of a total of $(48)^{10}$

We have $492556 = 125244$ ways for an easy grid to have an 8 somewhere. Out of the 1.88 trillion total easy grids, this gives a probability of about 6.1×10^{-8} . So, very rare indeed!
