The Integrated Visual Augmentation System (IVAS) is a revolutionary technology that provides real-time, helmet-mounted visual overlays to soldiers in the field. It enhances situational awareness and target identification capabilities. The system is being tested in various operational environments to assess its effectiveness in reducing casualties and improving mission outcomes.

The Integrated Visual Augmentation System (IVAS) is being tested in various operational environments to assess its effectiveness in reducing casualties and improving mission outcomes.

ous IVAS Capability Set (CS) 4 testing. Based on results of the Operational Demonstration (Ops Demo), the Army is adjusting the IVAS acquisition and fielding strategy. The system is being tested in various operational environments to assess its effectiveness in reducing casualties and improving mission outcomes.

Intravascular ventricular assist system (iVAS) is an investigative device in clinical trials for the management of advanced heart failure. It works on the principle of counterpulsation, similar to the classic intra-aortic balloon counterpulsation (IABP).
